Realistic Solution

WE BELIEVE TECHNOLOGY TO BE THE VEHICLE

HEIMDAL™
SECURITY

Heimdal Application Control
The simplest way to control application executions

Features of the Heimdal Application Control module:

- Allow or Block execution of apps based on File Path, MD5, Publisher, Certificate, or Software Name criteria
- Default approval for system applications
- Ability to use historical executions history for future Allow or Block decisions
- Ability to see what users have executed with a full audit trail
- Comprehensive filtering functionality with 90-day retention of all logs
- Option to remove existing rights and give access to application execution (NIST AC-6 compliance)

Upon enabling along with Privilege Access Management , both modules will further enhance each other:

- Define lists of apps which can be accessed only during elevated rights sessions
- Allow access to restricted applications during elevated sessions
- Restrict access to some applications even when user rights are elevated
- Allow access to running certain apps without full elevation necessary
