HEIMDAL™
S E C U R I T Y

Who is Heimdal Security? Developer of
Proactive Cyber Security Software
protects you and your data from cyber attacks that an antivirus can't block

Heimdal Security has a fully integrated network & endpoint protection suite with ground-breaking live threat intelligence, appraised by the FBI, and with products recommended by the RBS Banking Group.

- Worked with the FBI to track and bring down the original Cryptolocker domains
- Originated from two-time winners of the **Defcon CTF World Championships**

The only vendor in the market to have an offering to combine: next-generation anti-virus, traffic filtering down to DNS level on the endpoint, and silent, automated third-party patch management, using AI.

- Multiple layers of protection to defend both corporate networks and endpoints
- Scalable solutions from one endpoint through to corporate environments
- Multiple products run through one endpoint client giving exceptional management capabilities through a single admin portal
- A recommended add-on by Microsoft

WE BELIEVE TECHNOLOGY TO BE THE VEHICLE

HEIMDAL™ SECURITY

Heimdal™ Ultra
Heimdal™ modules in this package are as follows

1- Application Control
- Allow or Block execution of apps based on File Path, MD5, Publisher, Certificate, or Software Name criteria & Wild Path.
- Default approval for system applications
- Ability to use historical executions history for future Allow or Block decisions
- Ability to see what users have executed with a full audit trail
- Comprehensive filtering functionality with 90-day retention of all logs

2- Threat Prevention (DNS Filtering):

DARKLAYER GUARD™

- The Dark Layer Guard ™ is a unique 2-way traffic filtering engine that supports fully customizable white/black listing.
- With it, your organization can block network communication to mitigate Zero Hour exploits, Ransomware C&C's, next-gen attacks and data leakages.
- Using our ground-breaking Threat To Process Correlation technology, we can identify attacking processes and provide HIPS capabilities for endpoints.

VECTOR^N DETECTION™

- By tracking device-to-infrastructure communication, VectorN Detection™ will detect 2nd generation malware strains that no other product can see, effectively delivering a HIDS/HIPS at the machine traffic layer.
- Using machine learning to establish compromise patterns and offering indicators of compromise/ attack (IOA/IOC), this is a unique add-on that will boost any other type of endpoint security

HEIMDAL™
SECURITY

Heimdal™ Ultra
Heimdal™ modules in this package are as follows

3- Heimdal Security Next-Generation Endpoint Antivirus
Provides Impeccable detection and market leading mitigation.
Has 4 layers of Detection :
- Low impact local file/signature scanning
- Active registry change scanning
- Real-time cloud scanning with detection through machine learning
- Sandbox and backdoor inspection capability

Mobile Device Management (MDM) is included free of charge and offers the ability to remotely track and manage devices:
- Can remote locate devices
- Can remote wipe devices
- Can remote lock devices

HEIMDAL™
SECURITY

Heimdal™ Ultra
Heimdal™ modules in this package are as follows

Firewall:

Using connection and login activity scanning our firewall offers all the traditional firewall features, such as port and application management, as well as unique features such as

- Brute Force Ransomware prevention & automatically blocks the RDP Port to stop the attack
- device Isolation in case of suspicious activity.

4- Ransomware Encryption Protection

is a revolutionary 100% signature-free solution that protects your devices against malicious encryption attempts initiated during ransomware attacks. Ransomware Encryption Protection extends the functionality of the traditional antivirus, becoming a solution capable of preventing and protecting your endpoints against any type of ransomware attack.

Take full control of every process running on your endpoint – encryption protection is the only security solution on the market that can map out a previously unknown malicious activity and prevent it from encrypting your sensitive files.

HEIMDAL™
S E C U R I T Y

Heimdal™ Premium
Heimdal™ modules in this package are as follows

All included in Heimdal Security Ultra and...

5- Sandboxing based Patch & Asset Management

- Pre-emptive vulnerability management for both Windows and third-party applications by providing you Sand Boxed, patches and options to select critical and security patches only for Microsoft and update; the third-party to latest or any version of your choice
- Patching of third-party applications on the fly, anywhere in the world and according to any schedule, silently and automatically
- The ability to view and manage software inventories
- Full visibility and management via one centralized admin console, including being provided with all the tools needed for your patching/vulnerability management compliance requirements

Exclusive Value-Added Distributor.

HEIMDAL™
SECURITY

Heimdal™ Premium Plus
Heimdal™ modules in this package are as follows

All included in Heimdal Security Premium and...

6- Privileged Access Management
- Allow or block requests for escalations with one click (mobile approval supported) with full control of the escalation process (auto-approval flow can be defined)
- Only fully automated de-escalation upon identification of a threat solution
- Easy to control and define rules on a per administrator basis
- Individual rights can be defined per Active Directory group (NIST AC-5 compliance)
- Option to remove existing Admin rights (NIST AC- 1,6 compliance)

Exclusive Value-Added Distributor.
