HEIMDAL™
SECURITY

Heimdall™ Next-gen Antivirus Endpoint

Unparalleled Protection against all types of online threats

Antivirus remains an integral part of protecting any network.

In an ever-changing threat landscape, impeccable detection and powerful mitigation is a fundamental security layer. Heimdall's Next-Generation Endpoint Antivirus combines the techniques known by both traditional and next-gen Antivirus to detect and remediate viruses, APTs, financial fraud, ransomware, and data leaks.

Heimdall's Next-Generation Endpoint Antivirus Provides

- Impeccable malware detection rates
- Local and cloud scanning with behavioral detection
- Easy installation and lightweight on computer resources

Heimdall's Next-Generation Endpoint Antivirus leads the field in malware testing on its own. When supplied with Heimdall's Threat Prevention, thus gaining Heimdall's live intelligence feed, it gains the ability to mitigate otherwise hidden threats and provides essential EDR (Endpoint Detection and Response).

Heimdall Ransomware Encryption Protection protects the endpoint with Signature less EDR based technology. You can still whitelist all your old software which has been repaired by any previous AV, but the file does not meet the criteria published by the Developing Vendor.

Zero - Trust Execution Protection: Ensuring protection against Zero - hour threats compromising your network environment.

Heimdall™ Next-gen Antivirus Endpoint

Unparalleled Protection against all types of online threats

4 Layers of Scanning:

1- Local Signature-based Scanning

Heimdall™ Next-Gen Antivirus Home uses signature code scanning for all your local files to detect and stop potential viruses, APTs, exploits, data leakage, ransomware, and other advanced online threats. This first layer of protection is essential for enjoying online security.

2- Real-Time Cloud Scanning

All files unknown to the local database are sent to our secure cloud system for real-time scanning. Using advanced Machine Learning, potential threats are detected and stopped from infecting your computer.

HEIMDAL™
SECURITY

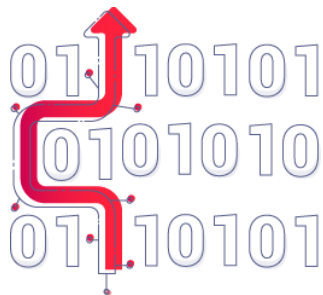

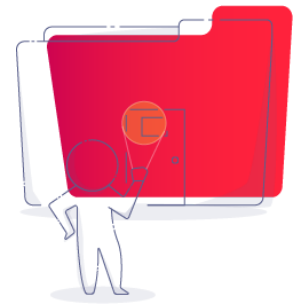

Heimdal™ Next-gen Antivirus Endpoint

Unparalleled Protection against all types of online threats

Features:

3- Sandbox and Backdoor Inspection

Suspicious files and other potential threats are isolated in our sandboxing system, where we check to see if they act as malware. We also check to see if the suspicious file tries to access servers using a backdoor method, in order to stop any malicious communication.

4- Heuristic and Behavior-based Scanning

When files start running, Heimdal™ Next-Gen Antivirus Home continues to monitor all processes on your computer using Heuristic, Behavior-based analysis. This way, it searches for suspicious behavior to detect code changes at all levels, stopping attacks from modifying your data.

Exclusive Value-Added
Distributor.

HEIMDAL™
SECURITY

Heimdal™ Next-gen Antivirus Endpoint

Unparalleled Protection against all types of online threats

Heimdal Firewall Endpoint Features:

Block RDP port on Brute force Detection

Even if the Hackers detect your Anonymous Port forwarded to RDP port. It will still block the RDP port if it detects the Brute force attack. It helps you identify who is trying to do the attack by showing you the IP address and number of times it does the attack.

Allow ICMP Echo Requests

You can define ICMP Block or allow in network, specifically if it is in cloud then blocking secures the published servers as undiscoverable. Isolation on tamper Detection and application of individual rules in this case.

Remote device control with (Mobile Device Management)

Next-Gen Antivirus comes with powerful Mobile Device Management (MDM) features that empower you to supervise your mobile device fleet from anywhere in the world and from any Windows-compatible machine. Remote-wipe or lock all stolen devices and accurately pinpoint the location of your misplaced smartphones. No more misplaced assets.
