WE BELIEVE TECHNOLOGY TO BE THE VEHICLE

**HEIMDAL™**  
SECURITY

## Patch and Asset Management

Deploy, Patch and Manage your Software Inventory

Vulnerability management should be proactive and not reactive, it should not be a constant drain on time and resources, with Heimdall Security these problems are solved.

Heimdall's Patch & Asset Management features provide:

- Pre-emptive vulnerability management for both Windows and third-party applications by providing you Sand Boxed, patches and options to select critical and security patches only for Microsoft and update; the third-party to latest or any version of your choice
- Patching and installation of third-party applications on the fly, anywhere in the world and according to any schedule, silently and automatically
- The ability to view and manage software inventories
- Full visibility and management via one centralized admin console, including being provided with all the tools needed for your patching/vulnerability management compliance requirements

**True cyber resilience and security start with efficient vulnerability management. It is critical for all organizations to be able to demonstrate compliance with the DPA 2018, the GDPR, and the UK PSN software patching regulation.**

Exclusive Value-Added  
Distributor.

## Patch and Asset Management

Deploy, Patch and Manage your Software Inventory

Heimdall's Patch & Asset Management also provides a Full Software Asset Management giving the ability to:

- See any software assets in inventory, alongside their version and installed volume
- Report and demonstrate compliance
- Update or roll-back software or OS
- Un-install any software
- Allow users to install "approved" software themselves
- Set the time you wish updates to happen

The **Infinity Management** add-on module will allow you to deploy any software, at any location, at any time.

It is a Software Repository in Cloud.

- Encrypted packages stored on Heimdall servers
- HTTPS transfers from Heimdall servers
- Available anywhere in the world with no need for additional infrastructure
- Ability to offer an installation catalog set by the system administrator
- Accepts any MSI/EXE installer and offers command lines for scripting

Exclusive Value-Added  
Distributor.
