WE BELIEVE TECHNOLOGY TO BE THE VEHICLE

HEIMDAL™
SECURITY

Threat Prevention (DNS Filtering) - Endpoint

Working together, DarkLayer Guard™ and VectorN Detection™ are the proactive, code-autonomous tools fine-tuned to layer on top of other protective, code-detection based technologies.

Enhanced with TTPC (Threat To Process Correlation), your organization gains the essential threat hunting tools to map out the security-critical points in your environment. Now enhanced with Predictive DNS, a truly revolutionary AI & ML algorithm that is capable of predicting a domain is malicious before it will host any malicious content. The advanced neural networks and AI linguistic analysis are capable of achieving an unprecedented level of truly intelligent prevention.

DARKLAYER
GUARD™

2- Threat Prevention (DNS Filtering):

- The Dark Layer Guard™ is a unique 2-way traffic filtering engine that supports fully customizable white/black listing.
- With it, your organization can block network communication to mitigate Zero Hour exploits, Ransomware C&C's, next-gen attacks and data leakages.
- Using our ground-breaking Threat To Process Correlation technology, we can identify attacking processes and provide HIPS capabilities for endpoints.
- By tracking device-to-infrastructure communication, VectorN Detection™ will detect 2nd generation malware strains that no other product can see, effectively delivering a HIDS/HIPS at the machine traffic layer.
- Using machine learning to establish compromise patterns and offering indicators of compromise/ attack (IOA/IOC), this is a unique add-on that will boost any other type of endpoint security

VECTOR
DETECTION™
